## i13- ESL emulator

For BMW E EU cars

### Emulator cable markings

red	+12V ACC
blue	GND
green	CODE

### emulator LED indication

green	Emulator power supply
red	emulator work - ESL simulation

Due to the fact that the voltage to the ESL is applied only for a short moment, after the ignition is turned on, the diodes in the emulator also light up only for a moment.

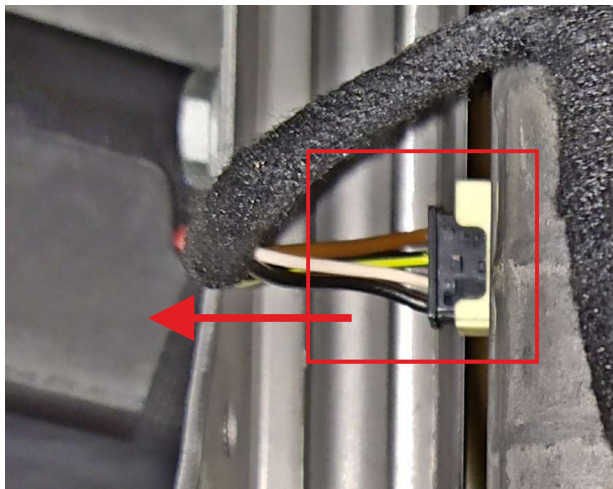

The emulator automatically adapts to the car. The car can be started immediately after installation.

No adaptation required. The disconnected ESL must be removed.

If the emulator does not work, reset the CAS module using a dedicated diagnostic interface.

### Installing the emulator for car installation:

### Check in your car which plug fits!

Carry out all activities with the ignition switched off.

Disconnect the wiring harness plug from the ESL

Connect the emulator plug to the wiring harness plug previously disconnected from the ESL lock
